

# HTML CSS Shortcuts

Using shortcuts and keyboard commands can significantly speed up your HTML and CSS coding process. Here are some useful shortcuts and keyboard commands for HTML and CSS development:

## HTML Shortcuts:

1. **! + Tab:** In many code editors, typing `!` and then pressing the Tab key will generate a basic HTML5 boilerplate structure.
2. **div + Tab:** Typing `div` and then pressing Tab will create a new `<div></div>` element.
3. **ul + Tab:** Typing `ul` and then pressing Tab will create an unordered list `<ul></ul>`.
4. **ol + Tab:** Typing `ol` and then pressing Tab will create an ordered list `<ol></ol>`.
5. **li + Tab:** Typing `li` and then pressing Tab will create a list item `<li></li>`.
6. **a + Tab:** Typing `a` and then pressing Tab will create an anchor link `<a></a>`.

## CSS Shortcuts:

1. **bgc + Tab:** Typing `bgc` and then pressing Tab will generate a background-color property.
2. **c + Tab:** Typing `c` and then pressing Tab will generate a color property.
3. **m + Tab:** Typing `m` and then pressing Tab will generate margin properties (e.g., `margin`, `margin-top`, `margin-left`, etc.).
4. **p + Tab:** Typing `p` and then pressing Tab will generate padding properties (e.g., `padding`, `padding-right`, `padding-bottom`, etc.).
5. **bd + Tab:** Typing `bd` and then pressing Tab will generate border properties (e.g., `border`, `border-top`, `border-color`, etc.).
6. **fs + Tab:** Typing `fs` and then pressing Tab will generate a font-size property.
7. **ff + Tab:** Typing `ff` and then pressing Tab will generate a font-family property.
8. **fw + Tab:** Typing `fw` and then pressing Tab will generate a font-weight property.
9. **ta + Tab:** Typing `ta` and then pressing Tab will generate a text-align property.
10. **di + Tab:** Typing `di` and then pressing Tab will generate a display property.
11. **pos + Tab:** Typing `pos` and then pressing Tab will generate position properties (e.g., `position`, `top`, `left`, etc.).

12. **fl + Tab:** Typing `£1` and then pressing Tab will generate a float property.

These are just a few examples, and the availability of shortcuts may vary depending on your code editor or integrated development environment (IDE). Be sure to explore your specific editor's documentation or settings to discover additional shortcuts and customize them to your preferences.
